RJ Corman 3478

The RJ Corman SD40-2 #3478

The RJ Corman Railroad Group is a multifaceted company that operates short lines in several states has become quite famous and well-respected, ranging from emergency rail services and short line railroad operations to dinner trains and aircraft maintenance! Rick Cormann started his company in 1973 and he began with little more than a backhoe and some determination (he initially started out in the rail services business being called in by railroads to do such things as re-rail trains or locomotives that had jumped the track) but with that has built an impressive railroad company, which among other things, now boasts nine different short line railroads in seven different Eastern states.

© Copyright Adam Burns

This particular reskin is most suited to the Ohio Rails 2 Route.

The SD40-2

The EMD SD40-2 is a 3,000-horsepower (2,200 kW) C-C diesel-electric locomotive built by EMD from 1972 to 1989. The SD40-2 was introduced in January 1972 as part of EMD's Dash 2 series, competing against the GE U30C and the MLW M630. Although higher-horsepower locomotives were available, including EMD's own SD45-2, the reliability and versatility of the 3,000-horsepower SD40-2 made it the best-selling model in EMD's history and the standard of the industry for several decades after its introduction. The SD40-2 was an improvement over the SD40, with modular electronic control systems similar to those of the experimental DDA40X.

The content included with this pack can be used in any scenarios. You are not permitted to redistribute this pack. You are encouraged to produce scenarios and send them to railworks@marlyman.co.uk.

Rolling Stock

The following default assets have been re-skinned and included in this package; RSC SD40-2

Installation

To use the models re-skin with Railworks 2/Train Simulator 2012 TS2013 you will have to read the manual and follow these instructions in order to see the re-skins in the game. This download requires the RSC SD40-2 available as a default engine.

I do not accept responsibility for any damage to your installation or your PC.

How to Install

Unzip this package to a temporary folder, e.g. C:\Temp and use the '**utilities**' program to install the file '*RJ Corman SD40-2 3478.rwp*'

1. Start the 'Package manager' using the Utilities.exe found in the folder 'Steam\steamapps\common\railworks'
2. At The top of the Train Simulator Utilities screen there are five tabs with options: Select the one Called Package Manager
3. Click the 'Install' Button on the right hand side of the screen that has now displayed.
4. It will open your windows file explorer. You will now have to use that to navigate to the .rwp file(s) you want to install. (In this case, *RJ Corman SD40-2 3478*). This means it has to have been unzipped and you need to recall where you 'left it' so to speak. If you forget then just unpack it again and make a mental note.
5. Double Click on the *RJ Corman SD40-2 3478* file to 'load' it.
6. Depending on how big the size is it will show a Green Bar as the 'package manager' installs the file.
7. Close the package manager.

You can check the reskin using the included free roam scenario if you have the Test Track Route.

v1.0 Initial Release
